How to

Install or Update

1

You'll need an iPod classic or iPod video running Rockbox to apply the theme.

Install Rockbox if you don't have it installed!

<https://www.rockbox.org>

2

Plug in the iPod

Open it up in your computer's File Browser.

3, in the iPod's storage

On the computer, navigate to the **iPod's** `.rockbox` folder.

You might need to show hidden files to see this folder.

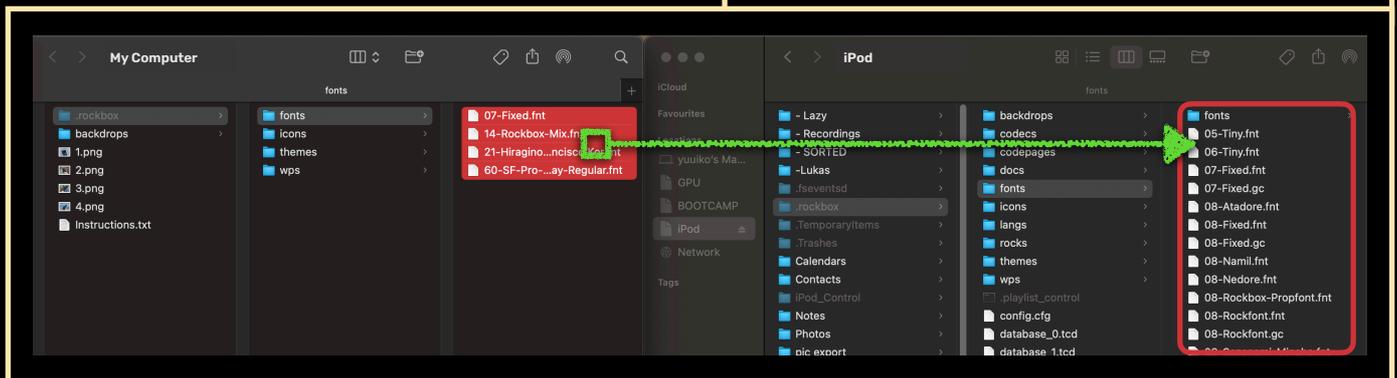

If you're on a Mac, hit [⌘⇧.] to toggle hidden files.

4, in your computer's storage

THIS folder you downloaded also contains a `[/code> folder.`

Merge its contents into the `[/code> folder on the iPod, making sure to place the files in the right folders.`

If updating, replace / delete any previous files or folders from older versions of this theme.

5

Eject and unplug the iPod once all files are in place.

6

On the iPod itself, boot into Rockbox.

Head to the theme settings to select the theme

or if updating to a new version of Infomatrix, re-select.

About the icons and symbols in this theme's

Special Screens

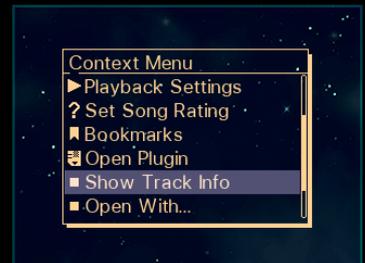

Home

Lock Hold on Home Scen

Context Long Prs Centre

QuickScreen Long Press Menu

Change quick settings by using the clickwheel.

You can add your own settings to this screen: head to Settings, and find a setting with a screw icon. Use the Context Menu to set your desired quick option

Clicker

Status of the menu clicking sounds

Settings
→ General Settings
→ System
→ Keyclick

Equaliser

modify your sound e.g. BIG BASS

Settings

→ Sound Settings
→ Equalizer

Party Mode

Selecting a song adds it to queue instead.

Settings

→ Playback Settings
→ Party mode

Sleep Timer

After the timer ends, turn off the iPod.

Settings

→ General Settings
→ Startup / Shutdown

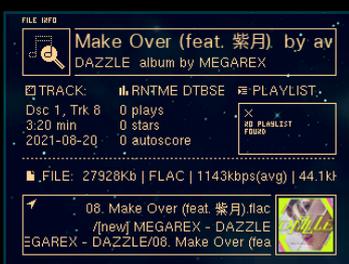

Cross Fade

Fade volume between songs

Settings

→ Playback Settings
→ Crossfade

File Info Screen While Playing Screen → Context Menu → Show Track Info

Runtime Database Section

You must enable "Collect Runtime Data" to see statistics in this section.

Playlist Section

Playlist information will be displayed if you are playing a playlist.

Customisation

This theme is fully customisable.

About Customisation

Infomatrix is built to be fully customisable. To customise, have a go at changing:

Settings

→ Theme Settings

- Font
- Show Icons
- Clear Backdrop
- Status / Scrollbar
- Line Selector Type
- Line Separator
- Colours

More help can be found on next pages.

Saving Customisations

If you like a setup and would like to save it for later use, you can save it by:

Home screen

Scroll to Settings

→ Hold Centre on Settings

→ Save Theme Settings

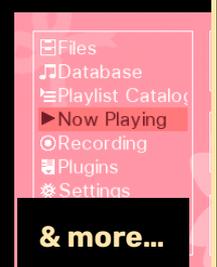

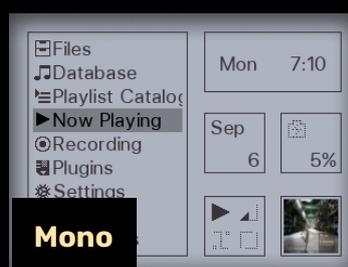

Name your setup

<< >> and scroll to navigate keyboard

Menu to cancel

Play to confirm.

Included Pre-Made Themes [Theme Settings](#) → [Browse Theme Files](#)

Included Extra Backgrounds [See the last page to find out how to apply backgrounds.](#)

Customise the UI Colours

Customisation Settings

Foreground Colour

Controls the colour of the lines and text.

Line Selector → Primary Colour

Controls the background colour of the selector bar

Line Selector → Text Color

Controls the text colour of the selected list item

Background Colour

Controls the colour of the background if the background image is not displayed

Line Selector → Secondary Colour

Only visible if you're using the gradient style line selector.
Controls the second colour of the gradient.

Line Separator Color

Controls the colour of the line separator if enabled.

Line Selector Type

Adjust the style of the line selector.

Change the style of the line selector:

- An arrow Cursor
- Invert the Foreground Colour
- Set Custom Colours (flat)
- Set Custom Colours (gradient)

Line Separator

Add a line between each list item

You can change the thickness with
Theme Settings
→ Line Separator

And it's colour with
Theme Settings
→ Colours

Using the Color Picker

This is what you would use to select colours.

- << >> Choose R, G, or B to control
- Scroll Adjust the selected colour
- Menu Cancel
- Play Set

I suggest you pause music before you set colours to avoid crashes.

If the RGB values are confusing, you might want to find a graphical colour picker and match the "RGB: #####" code.

Customise the

Background Image

Custom Background Requirements

Background images need to meet certain specifications in order to be able to be used as a theme background.

Must be the exact pixel dimensions of the screen

For the iPod Video and iPod Classic, background images need to be exactly 320 x 240px.

Must be BMP format

The image must be in the BMP format, not PNG or JPEG.

Finding or creating a custom background

Your Infomatrix Plus pack comes with a few backgrounds I have made as a bonus.

They are all the correct size and format, ready to go. Unless you want your own background, continue below.

If you want to add your own background, you'll need to resize your image to 320 x 240px.

Use an image editor to resize the image to exactly 320 x 240px.

It may be easier to first crop the image to the 4:3 ratio, then resize it to 320 x 240px.

Finally, convert or export the image to BMP format.

You can try an online converter, but I've just been using photoshop.

Applying the custom background

1
Copy the background to the iPod, wherever

2
Eject and unplug the iPod

3
Navigate to your BMP image on the iPod

4
Hold Centre to bring up the context menu.

4
Hit "Set as Backdrop"

Not seeing "Set as backdrop"?
The "Set as Backdrop" will only show if the backdrop image is the right spec. See above.

Reset
Hit "Clear backdrop" in Theme Settings.
